Abstract--We investigate the profitability and risk of energy storage arbitrage in electricity markets under price uncertainty, exploring both robust and chance-constrained optimization approaches.

Considering three profit modes of distributed energy storage including demand management, peak-valley spread arbitrage and participating in demand response, a multi-profit model of distributed ...

Industrial and Commercial Energy Storage: Peak valley arbitrage is a common profit strategy, especially where substantial price differences exist, making electrochemical storage economically viable.

The widening of the peak-to-valley price gap has laid the foundation for the large-scale development of user-side energy storage. When the peak-to-valley spread reaches 7 Jiao/kWh, the ...

The coupling system generates extra revenue compared to RE-only through arbitrage considering peak-valley electricity price and ancillary services. In order to maximize the net revenues ...

The peak-valley arbitrage is the main profit mode of distributed energy storage system at the user side (Zhao et al., 2022). The peak-valley price ratio adopted in domestic and foreign time-of ...

To comprehensively consider the direct income of peak-valley arbitrage and indirect income of energy storage configuration, a coordinated planning model of source-storage-transmission is constructed ...

In order to further improve the return rate on the investment of distributed energy storage, this paper proposes an optimized economic operation strategy of distributed energy storage ...

In summary, it indicates that the optimization of IES to participate in multi-market trading operation, such as peak-valley arbitrage, frequency regulation, and leasing, can significantly improve ...
