

# Brazil solar power generation timeline

Solar energy has great potential in Brazil, with the country having one of the highest levels of insolation in the world at 4.25 to 6.5 sun hours/day. [4] As of 2019, Brazil generated nearly 45% of its energy, or ...

Brazil is expected to add 13.2 GW of solar capacity in 2025, but the market is showing early signs of slowing as new large-scale projects face delays and distributed generation encounters...

Distributed solar generation capacity grew from less than 1 gigawatt (GW) in 2018 to 40 GW in 2025 through June, accounting for 43% of all electricity capacity additions over that period.

Between 2014 and 2022, 194 solar energy projects were successful in these auctions, providing data that allows us to analyze the evolution of solar photovoltaic utility-scale energy ...

In 2020, the country's installed solar PV capacity stood at 8.5 gigawatts. By the end of 2024, this had grown to roughly 53 gigawatts. The Brazilian solar sector is experiencing a rapid...

Brazil's electricity generation capacity has surged since 2019, driven largely by distributed solar, which grew from under 1 GW in 2018 to 40 GW by mid-2025--accounting for 43% ...

Solar energy in Brazil surpassed the 55 GW milestone in March 2025, more than doubling its photovoltaic (PV) count in the last few years. That breakneck expansion is reshaping Brazil's energy ...

Self-generation is widespread across Brazil, with installations present in over 5,500 municipalities, and homes making up the majority of consumer units (69.2 percent) using solar ...

Starting with less than 50 MW at the beginning of the 2010s, mostly from isolated systems, solar photovoltaic power reached over 50 GW of installed capacity by early 2025--an ...
