Does industry need standards for energy storage?

As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards ..." [1, p. 30].

Does energy storage need C&S?

Energy storage has made massive gains in adoption in the United States and globally, exceeding a gigawatt of battery-based ESSs added over the last decade. While a lack of C&S for energy storage remains a barrier to even higher adoption, advances have been made and efforts continue to fill remaining gaps in codes and standards.

What is energy storage R&D?

[1, p. 30]. Under this strategic driver, a portion of DOE-funded energy storage research and development (R&D) is directed to actively work with industry to fill energy storage Codes & Standards (C&S) gaps. A key aspect of developing energy storage C&S is access to leading battery scientists and their R&D insights.

Can the energy storage industry access critical tools for 100 MW projects?

The DOE sponsored an effort to gather input from traditional risk products and finance providers serving more established technologies (e.g., wind, gas generation) to identify how the energy storage industry can access critical tools needed for 100 MW or larger scale projects. The resulting report, published in 2019, is a best
