

# Do Europeans generate electricity from solar energy

In June 2025, solar was the largest source of EU electricity for the first time, with multiple countries producing record amounts of solar power. Wind power in the EU started the summer ...

In 2008, solar photovoltaic accounted for just 1% of Europe's electricity. Today it represents 10% in the EU and even 23% in Greece, 19% in Spain or 16% in Germany, making it one ...

Solar energy has become one of Europe's fastest-growing and most promising sources of renewable power. One of their contributors, solar photovoltaic (PV) systems, now supplies 10% of ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, driven by a massive surge in solar power.

For the first time in history, solar energy became the leading source of electricity generation in the European Union in June 2025, marking a major milestone in the continent's transition toward ...

Solar energy was the main source of electricity in the European Union for the first time in history in June, according to new figures.

In 2008, just 1 per cent of Europe's renewable energy mix came from solar power. In 2023, solar made up 20.5 per cent of that output, according to the Commission.

Wind and solar energy made up a record share of the European Union's (EU) electricity generation in the first half of 2024, overtaking fossil fuels for the first time, a new report has unveiled.

Shine like the sun Solar panels across the EU produced more electricity than any other source, generating 22.1% of the bloc's power, just edging out nuclear at 21.8%.

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals ...
