

Double-row flexible PV supports adopt prestressed cables and two rows of PV panels; thus, these supports have good terrain adaptability and power generation efficiency and have ...

In order to respond to the national goal of "carbon neutralization" and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed ...

Our single-support system for open-space installations is particularly efficient and especially suitable for difficult ground conditions. It is suitable for single and double-row solar installations, both with ...

Double-row flexible PV supports adopt prestressed cables and two rows of PV panels; thus, these supports have good terrain adaptability and power generation efficiency and have become a new ...

To better understand the structural behavior and prevent potential failure, this study presents a simplified analytical model for the design of double-layer flexible cable photovoltaic ...

In this paper, the mechanical behavior of a single-cable structure is introduced, and the simplified analytical formulations for internal force and displacement are deduced based on the ...

A certain photovoltaic power generation project adopts a double-layer cable flexible support structure, with the lower chord cable as the load-bearing cable and the upper chord cable as the stabilizing cable.

The results showed that the double-layer cable large-span flexible PV support can effectively control the wind-induced vibration response and prevent the occurrence of flutter under strong wind conditions.
