

As solar PV deployment ramps up across the EU, it's not just about harnessing clean energy - it's also about powering job growth. The expansion of solar installations creates a ripple effect, spurring ...

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

According to new data from Eurostat, renewable energy sources generated 54% of the EU's net electricity in Q2 2025, up from 52.7% year-over-year. The growth came mainly from solar, ...

The EU's electricity transition reached a new milestone in 2025 with wind and solar generating more power than fossil fuels.

Solar energy is advancing strongly across Europe thanks to falling costs and its growing role in electricity generation. In 2025 it exceeded capacity targets and became the main source of ...

Solar is the fastest growing energy source in the EU and is cheap, clean and flexible. The cost of solar power decreased by 90% between 2010-2023, according to the International Renewable Energy ...

EU solar power output grew 21.7% (i.e., by 54 terawatt-hours, TWh) in 2024, expanding from 9.3% to 11.1% of total generation - a trend mostly driven by new capacity additions. Solar plants ...

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals ...

Renewables accounted for close to half of electricity generation in the European Union (EU) in 2025, marking a shift from a marginal role to a system-defining position.

At least thirteen EU countries set new solar records, according to the report from Ember, an independent, data-based, global energy think tank. Rooftops, farmland, brownfields, and massive...
