

Guinea substation power generation

Did Guinea import electricity?

Guinea did not import electricity. Power generation, which includes electricity and heat, is one of the largest sources of CO2 emissions globally, primarily from the burning of fossil fuels like coal and natural gas in thermal power plants.

Why do we need electricity connections in Guinea?

Such connections can help to balance out supply and demand across regions, which will be increasingly important as variable renewables like solar and wind make up a larger share of electricity generation. Guinea did not import electricity.

What drives electricity production in Guinea?

Electricity production tends to closely match demand, which in turn is driven by economic and population growth and changes to the structure of the economy. No data for Guinea for 2022.

How many people in Guinea have electricity?

This target implies making an additional 1.7 million connections over the period 2018-2030. However, only 46% of the Guinean population has access to electricity, with only 18% of the population having formal and legal access to electricity (this rate falls to 2% in rural areas).
