

Lisbon climate change

Lisbon is a most vulnerable city to extreme climate events and the performance and management of the numerous and diverse trees found in its gardens and parks are of much concern.

The Sustainable Energy and Climate Action Plan of Lisbon describes the city's climate mitigation and adaptation objectives.

Climate change is not globally uniform and affects some regions more than others. On the following diagrams, you can see how climate change has already affected the region of Lisbon during the past 40 years.

Change in Weather Temperatures Wild Fires in Portugal Lack of Rain and Drought in Portugal Geographical Area of Portugal & Sea Level Rise Impact on Agriculture & Food Production Economic Impacts Health Impacts How Is Portugal Fighting Climate Change? According to the European Parliamentary Research Service, Portugal generates 1.8% of the EU's total greenhouse emissions as of 2021. In 2019, the carbon intensity of the country's economy (measured as CO₂ emissions per unit of GDP) was 22% more than the EU average. However, Portugal seems to be making progress to combat climate change. In 2019, Por... See more on [portugal](#)
