Our 4-step process combines precision, innovation, and unmatched safety to deliver lithium batteries that power the future. From design to final assembly, excellence drives every stage.

These smart powerhouses combine 10 series-connected cells with sophisticated battery management, creating the backbone for renewable energy systems, industrial equipment, and high-performance EVs.

After ensuring that the BMS is normal, solder the blue B- wire on the BMS to the total negative B- of the battery pack. The P-line on the BMS is soldered to the negative pole of charge and discharge.

In conclusion, choosing a suitable 10S Lithium Battery BMS requires careful consideration of compatibility, protection features, balancing function, communication interface, size, and cost.
