Netherlands Crude Oil Production
Netherlands Oil Products Consumption
Netherlands Natural Gas Consumption
Netherlands Coal Consumption
Netherlands Power Consumption
Netherlands Renewable in % Electricity Production
Netherlands CO2 Fuel Combustion/Co2 Emissions

Energy consumption per capita reached 3.4 Mtoe in 2023 and is 17% higher than the EU average, mainly because of the large refining and petrochemical industries. Per capita electricity consumption is 6,100 kWh, which is 10% above the EU average. Total energy consumption decreased by 4% in 2023 to 61 Mtoe, after a 10% decrease in 2022 and a 3% post-Co... The total electricity consumption of the Netherlands in 2021 was 117 terawatt-hours (TWh). The consumption grew from 7 TWh in 1950 by an average of 4.5% per year. In 2021, fossil fuels, such as natural gas and coal, accounted for around 62% of the total electricity produced. Renewable energy sources, such as biomass, wind power, and solar power, produce 38% of the total electricity. One nuclear plant in Borssele is resp...

In line with the European Union's Green Deal, the Dutch government is targeting to reduce greenhouse gas emissions by 95 percent by 2050. Apart from a focus on greater energy ...

The total electricity consumption of the Netherlands in 2021 was 117 terawatt-hours (TWh). [1] The consumption grew from 7 TWh in 1950 by an average of 4.5% per year. [2]

In 2023, 15 percent of energy consumed in the Netherlands was renewable: a total of 403 PJ. The production and consumption of solar energy, in particular, has grown sharply in recent years. Despite ...

In 2021, electricity was the third largest energy carrier in the Netherlands, with an electricity consumption of 385.8 PJ. Around 33% of this total can be considered renewable electricity.

Discover data on Electricity Supply and Consumption in Netherlands. Explore expert forecasts and historical data on economic indicators across 195+ countries.

Electricity's share of final energy consumption rose to 24% in 2024, projected to reach 76% by 2050. Industrial energy use declined 0.7% annually since 2010, with gas dominant.

Energy budget, consumption and production capacities in the Netherlands, including a comparison with the

USA. CO2 emissions, share of renewable energies.

Growth in electricity demand has slowed down or even reversed in many advanced economies due to energy efficiency efforts and the shift towards less energy-intensive forms of economic activity, such ...

Consumption of electricity is calculated from the supply variables. The supply of electricity primarily includes production plus imports minus exports. The majority of the electricity produced is ...

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your ...
