

Northeast China receives photovoltaic panels

China's solar power capacity is on course to surpass coal this year A sunset glow lights up wind turbines and rows of solar panels at a wind farm in Qingyang, Gansu province, China.

Hundreds of rows of gleaming panels blanket swathes of scrubby sand at sunset in a remote northern Chinese desert -- once the biggest solar farm in the world.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

Shares of Chinese solar panel makers surged after a team of staff sent by Elon Musk had reportedly visited several photovoltaic suppliers in China.

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic solar capacity to reach its climate target....

In recent years, China's northeast region has been accelerating the layout of the clean energy industry based on the resource advantages, speeding up the development of clean energy ...

Some of the largest projects under development are in the Inner Mongolia region in northern China. The Kubuqi Desert in Inner Mongolia is the planned site of the largest collection of ...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

China's solar panel installations surged in the first half of the year as developers sought to complete projects before the new policy, which removed a guaranteed rate of return, took...

In recent years, the three northeastern provinces of Liaoning, Jilin, and Heilongjiang have sped up the development of clean energy generation such as wind power, photovoltaic power and biomass ...

Northeast China receives photovoltaic panels
