

Outward Bound Training Simulation Power Grid Micro Course

Course participants will learn how to use Simulator OPF to calculate marginal prices at each bus in a system (also known as locational marginal prices or LMPs).

In collaboration with IncSys, LEAPS offers an interactive 2-day training focused on power grid operation and cybersecurity. This workshop utilizes the Incsys PowerSimulator training software to provide ...

Explore microgrid modeling, three-phase circuits, and power system algorithms like droop control and maximum power point tracking in this hands-on simulation experience.

Explore the intricacies of electrical power system design with our comprehensive module, designed to elevate your foundational knowledge. Through online live lectures and interactive tutorials, students ...

This training program will provide an in-depth overview of microgrid applications, technologies, and configuration, as well as examples and virtual tours of operational microgrids, and detailed ...

This training is developed for professionals in order to learn a microgrid from a systems engineering point of view and apply systems engineering disciplines to structure a microgrid.

This comprehensive training course by Tonex provides participants with a deep understanding of microgrid systems, from design principles to implementation strategies.

Microgrids are emerging as a cost-effective and scalable option for meeting global energy demand. Countries throughout the world are now exploring Microgrids as a reliable, low-cost, and timely ...

Search results include courses that start up to 7 days after your selected date.

This course provides a comprehensive introduction to the fundamentals and specifics of microgrids. Participants will explore benefits, applications, configurations, challenges, policies, and funding ...
