

# Public energy storage system integrity service

The Department of Energy Office of Electricity Delivery and Energy Reliability Energy Storage Program would like to acknowledge the external advisory board that contributed to the topic identification, ...

PNNL research provides a clear understanding of the technology needs for integrating safe energy storage into the grid. Staff at PNNL work with utilities and broad stakeholders across industry to ...

As the penetration of energy storage systems (ESSs) increase and grid operators place more reliance on ESS functionality, it becomes critical to protect those assets from physical or cyberattacks to ...

Consider the design of BESS units (battery chemistry, manufacturing quality assurance/quality checks, unit design, battery management system analytic capabilities, and system integration) and consult ...

This webpage includes information from first responder and industry guidance as well as background information on battery energy storage systems (challenges & fires), BESS installation ...

That said, the evolution in codes and standards regulating these systems, as well as evolving battery system designs and strategies for hazard mitigation and emergency response, are working to ...

Resolution ESRB-13, adopted March 13, 2025, establishes GO 167-C to expand maintenance and operation standards to energy storage systems and updates safety and emergency planning ...

by an agency of the U.S. Government. Neither the U.S. Government nor any agency thereof, nor any of their employees, makes any warranty, expressed or implied, or assumes any legal liability or ...

These facilities store massive amounts of electrical energy, especially from renewable sources, and represent significant capital investments, making them attractive targets for theft, vandalism, and ...

INL employs a systems-of-systems approach to evaluate the cybersecurity risks of various components within digital energy systems. By assigning cyber criticality scores, INL helps prioritize which ...
