

Seesaw wind blade power generation

Several designs are proposed that use mechanisms to convert the up and down or swinging motions into rotational motion that can power generators or charge batteries.

- "Power Generation Using See-saw Mechanism" Uses The Energy Which Gets Wasted During The Clutch Operation. This Project Generates The Electricity By Using The Energy Stored In The Wheel.

In playgrounds, we see a lot of energy going to waste. We have designed a see-saw that utilizes the mechanical energy and converts it into useful electrical energy. Every day, a large number of...

The seesaw movement electricity generation equipment based on electromagnetic induction law is used for generating electrical energy by employing the up and down movement of a seesaw...

Most of the renewable energy sources, such as solar, wind, and ocean, are sustainable, i.e., we can utilize them to generate electricity without putting them into danger of getting vanished or...

The seesaw moves the connecting rod, turning the crank attached to the big gear (crown wheel), which is meshed to a smaller gear (pinion wheel) with a gear ratio of 5:1 that then turns the motor shaft ...

You know, traditional wind turbines require vast open spaces and complex infrastructure - but what if we could generate renewable energy through children's laughter?

Through the use of wind, solar, hydro, and human generated power, the system is provided with DC power. The goal of the human powered generator is to implement a seesaw in a playground where ...

This document describes a senior project to design a human-powered electricity generator using a seesaw. The project aims to harness the energy of children playing on a seesaw to generate power.

Design student Daniel Sheridan has created a simple see-saw which generates enough electricity to light a classroom. The device works by transferring the power, created by a child moving ...

Seesaw: Energy Generation from Up and Down Motion
Abstract Introduction Methods and Approach Conclusion Acknowledgements
We began by brainstorming ideas of how humans produce mechanical energy that is not captured by any device or converted into electricity. We landed on two activities during which people frequently do this, using equipment in the gym, such as stationary bicycles and weight machines, and playground equipment in parks, such as seesaws and merry-go-rou...
