What size solar inverter do I Need?

For homes that mainly use basic appliances like refrigerators, computers, and TVs, a small power inverter in the range of 3-5kW is typically sufficient. Choosing the right size for your solar inverter for home ensures that you have enough power to meet your daily energy requirements without overloading the system.

What should I know before installing a solar inverter?

Do not install the inverter outdoors in salt, sulfur, or other corrosive areas. Prevent the inverter from direct exposure to sun, rain, and snow. The inverter should be well-ventilated. Ensure air circulation. Never install the inverter in living areas. The inverter will generate noise during operation, affecting daily life.

How do I connect multiple inverters to a PV system?

When there is only one inverter in the PV system, connect the additional grounding cable to a nearby grounding point. When there are multiple inverters in the PV system, connect grounding points of all inverters and the PV array frames to the equipotential cable (according to the onsite conditions) to implement an equipotential connection.
