

More than half of UK electricity generation came from renewables in 2024, a first for annual production in a year which saw solar output hit record highs.

The UK's solar farms and rooftops generated more electricity than ever before in the first five months of 2025, as the country enjoyed its sunniest spring on record.

In the UK, the annual electricity generation from a PV array is highest if it faces due south with an inclination of 35 degrees. Figure 3 shows the percentage of the maximum yield that a solar array ...

UK solar generation records have continued to tumble this year, with a new record of 14GW being set this week

Over the course of the year, solar panels generated more than 18TWh - over 6% of British electricity. While that is still a relatively small share, it marks a growth of more than 4TWh versus...

Data from the National Energy System Operator shows that solar sites in the UK generated 7.6 terawatt hours (TWh) of electricity in the first five months of 2025. That's 42 percent ...

The table above shows electricity production from solar panels as a percentage of the final consumption of electricity in the UK and not gross supply to the grid.

Solar power generation in Britain so far this year has surpassed the total for 2024 as panels are rapidly installed amid favourable weather, underlining renewable energy's increasing...

Find the most up-to-date statistics about solar photovoltaic energy in the United Kingdom (UK)

Solar panel installations in the UK hit 1.73 million in 2025, a 6.8% rise from the previous year. Renewables now provide 37% of the UK's electricity, surpassing fossil fuels for the first time. ...

Solar panels power generation in the UK
