

Solar power generation poverty alleviation program

China's photovoltaic poverty alleviation projects (PPAPs) aim to help alleviate poverty by using the new energy power generation. In recent years, the PPAPs have flourished with the strong ...

Poverty-alleviation programs using solar energy (PAPSE) are poised to unlock unprecedented capital investments with significant potential to reconcile the energy-poverty-climate ...

Researchers from the University of Zurich and Wuhan University have assessed how solar energy resources affect social and economic development to reduce poverty in China, using ...

Since 2013, China has implemented a large-scale initiative to systematically deploy solar photovoltaic (PV) projects to alleviate poverty in rural areas.

The photovoltaic poverty alleviation project, part of the "Ten Major Precise Poverty Alleviation Projects" implemented by the Poverty Alleviation Office of the State Council, significantly ...

Energy poverty is a serious problem worldwide and has attracted the attention of policymakers. As a type of social welfare project, photovoltaic poverty alleviation projects (PPAPs) ...

China implemented a solar photovoltaic (PV) poverty alleviation (PVPA) policy of building nearly 0.24 million PVPA power plants in 2014-2020 to fight poverty.

By employing a difference-in-differences strategy, we find that the community-based PVPA stations distributed in China are anti-poverty facilities that can reconcile equity and efficiency.

Wang et al. (2020) pointed out that poverty alleviation projects based on solar photovoltaic power generation improve the energy structure by utilizing solar radiation energy and create employment
