

Japan Solar Update: No.138 (Mar 3 ~ 7, 2025) TEPCO Power Grid, Incorporated is Likely to Conduct Its First-Ever Renewable Energy Output Curtailment in the Tokyo Metropolitan Area in FY ...

Japan has achieved a breakthrough in renewable energy by building the world's first osmotic power plant -- a facility that generates electricity simply by mixing seawater and river water ...

In the pursuit of decarbonisation, hydrogen is increasingly seen as a solution to the limitations of renewable energy, which, despite growth in solar and wind power, faces cost challenges and ...

Over the last several years, the Japanese government has announced energy policies aimed to achieve carbon neutrality, or net-zero greenhouse gas (GHG) emissions, by 2050 by ...

Renewable energy in Japan will receive a seismic shift via perovskite solar cells, the latest development that would change the way solar energy is viewed. Lightweight, flexible, and adaptable, these solar ...

We will realize our vision of Tokyo as a more resilient, prosperous, and livable city. Questions about solar power installation Q Who is responsible for installing solar power generations? ...

Maximum capacity of renewable power plants in Japan as of September 2024, by energy source (in million kilowatt hours)

Sotetsu Clean Energy acquired 25 operational solar power plants totaling about 40MWDC in December 2025, the company announced on January 26, 2026. According to the company, 10 of ...

This article covers considerations on Tokyo's new solar panel installation mandate, current energy generation challenges and examples from Germany's initiatives.

The Tokyo Metropolitan Government has introduced 73 Toyota fuel cell buses to the metropolitan bus fleet operated by its Bureau of Transportation. The buses will be deployed for ...

Tokyo power plant clean solar energy
