

Total wind power generation exceeds nuclear power

The United States saw a historic moment in the first half of 2024 as electricity generated from solar and wind farms combined exceeded output from nuclear plants for the very first time.

Generation from all renewables combined - wind, solar, hydro, geothermal, and biomass - rose by 3.1% to a record 1,061,258 GWh, driven by surging generation from wind (+7.7%) and ...

While rapid growth in solar and wind has increased the amount of power coming from renewables, a lack of enthusiasm for nuclear means it's playing a shrinking role in the global ...

The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

In Q1 2025, wind + solar provided 6.8% more electricity than coal and 6% more than US nuclear power plants, according to new US EIA data.

Last year, the U.S. electric power sector produced 4,090 million megawatthours (MWh) of electric power. In 2022, generation from renewable sources--wind, solar, hydro, biomass, and ...

Wind was the second-largest source of power generation in the country on March 29, the U.S. Energy Information Administration reported yesterday, marking the first time wind output had ...

For the first time ever, U.S. electricity generation from utility-scale solar and wind exceeded nuclear power plants' power output in the first half of 2024, according to data from energy...

Combined electricity generation from solar and wind farms in the United States surpassed output from nuclear plants for the first time during the opening half of 2024, cementing renewable...

The combined energy generation in the United States from solar and wind during the first half of the year was more than that of nuclear plants for the first time, according to data from energy ...

Total wind power generation exceeds nuclear power
