

Uninterruptible power supply for one hour

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) keeps your essential devices temporarily online, which provides a window for you to hit send on that last-minute email. While a standard power strip or surge protector offers sufficient, albeit basic, protection, a UPS ensures devices are properly shut down and are protected from data loss.

When should you consider an uninterruptible power supply?

You should consider an Uninterruptible Power Supply if: While computers are the focus of our post today, Uninterrupted Power Supplies can also be useful for home entertainment systems, medical equipment, and home security systems, among other things that need continuous uninterrupted power.

How much power does an ups have?

It offers 300 watts of output power--perfectly suitable for a more modest setup. The UPS automatically switches off from the battery backup when your power comes back on. And when the time comes, you can replace its battery instead of replacing the entire unit.

How much does a replacement battery cost for an uninterruptible power supply?

The replacement battery kit can cost around \$100, depending on the size and battery capacity of your Uninterruptible Power Supply. Some Uninterruptible Power Supplies share a data connection over a USB or serial cable so that they can speak to the computer via software to let it know when to shut down.

Power outages are no match for these UPS battery backups. Brands like CyberPower and APC supply the best ones for your home office or small business.
