Solar energy is the conversion of sunlight into usable energy forms. Solar photovoltaics (PV), solar thermal electricity and solar heating and cooling are well established solar technologies.

Photovoltaics (PV) or solar cells are becoming more widely accepted for applications that can be grouped into categories including, PV with battery storage, PV with generators, PV connected ...

PV can be the solution--for rural homes, villages in developing nations, lighthouses, offshore oil platforms, desalination plants, and remote health clinics. In urban or remote areas, PV ...

Solar panel technology advances include greater solar cell efficiency and the use of new and more abundant solar panel materials.

Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating solar-thermal power technologies, electrical grid systems integration, and the non ...
