

Renewable energy has produced more electricity than coal for the first time, according to a report from energy think tank Ember. Global electricity demand grew by 2.6% in the first half of ...

Coal may yet hold off wind and solar with a strong five months to close 2024. But renewables are likely to overtake the former king of the power sector sooner rather than later.

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the global reliance on environmentally...

China has significantly increased its coal power capacity, reviving concerns about its climate-changing carbon emissions BEIJING -- Even as China's expansion of solar and wind power ...

Last year wind and solar produced around 16 percent of U.S. power, slightly outstripping coal, according to a preliminary analysis from the Rhodium Group. The amount of power supplied by ...

Coal may yet hold off wind and solar with a strong five months to ...

Wind turbines generated more electricity than coal-burning power plants across the United States in March and April, outstripping the dirtiest fuel for two consecutive months for the first...

Electricity generation from wind established a new record in the United States in April, and wind generation exceeded coal-fired generation in both March and April, data from our July 2024 ...

Electricity demand is growing around the world but the growth in solar and wind was so strong it met 100% of the extra electricity demand, even helping drive a slight decline in coal and gas...

For the first time on record, renewable energy from solar and wind produced more electricity than coal in the first half of 2025. For the first time ever, renewable energy has overtaken ...

According to a report by climate think tank Ember, wind and solar power together outpaced coal generation in the first half of 2025, driven largely by record solar expansion and steady...
